

ROCKSHIP

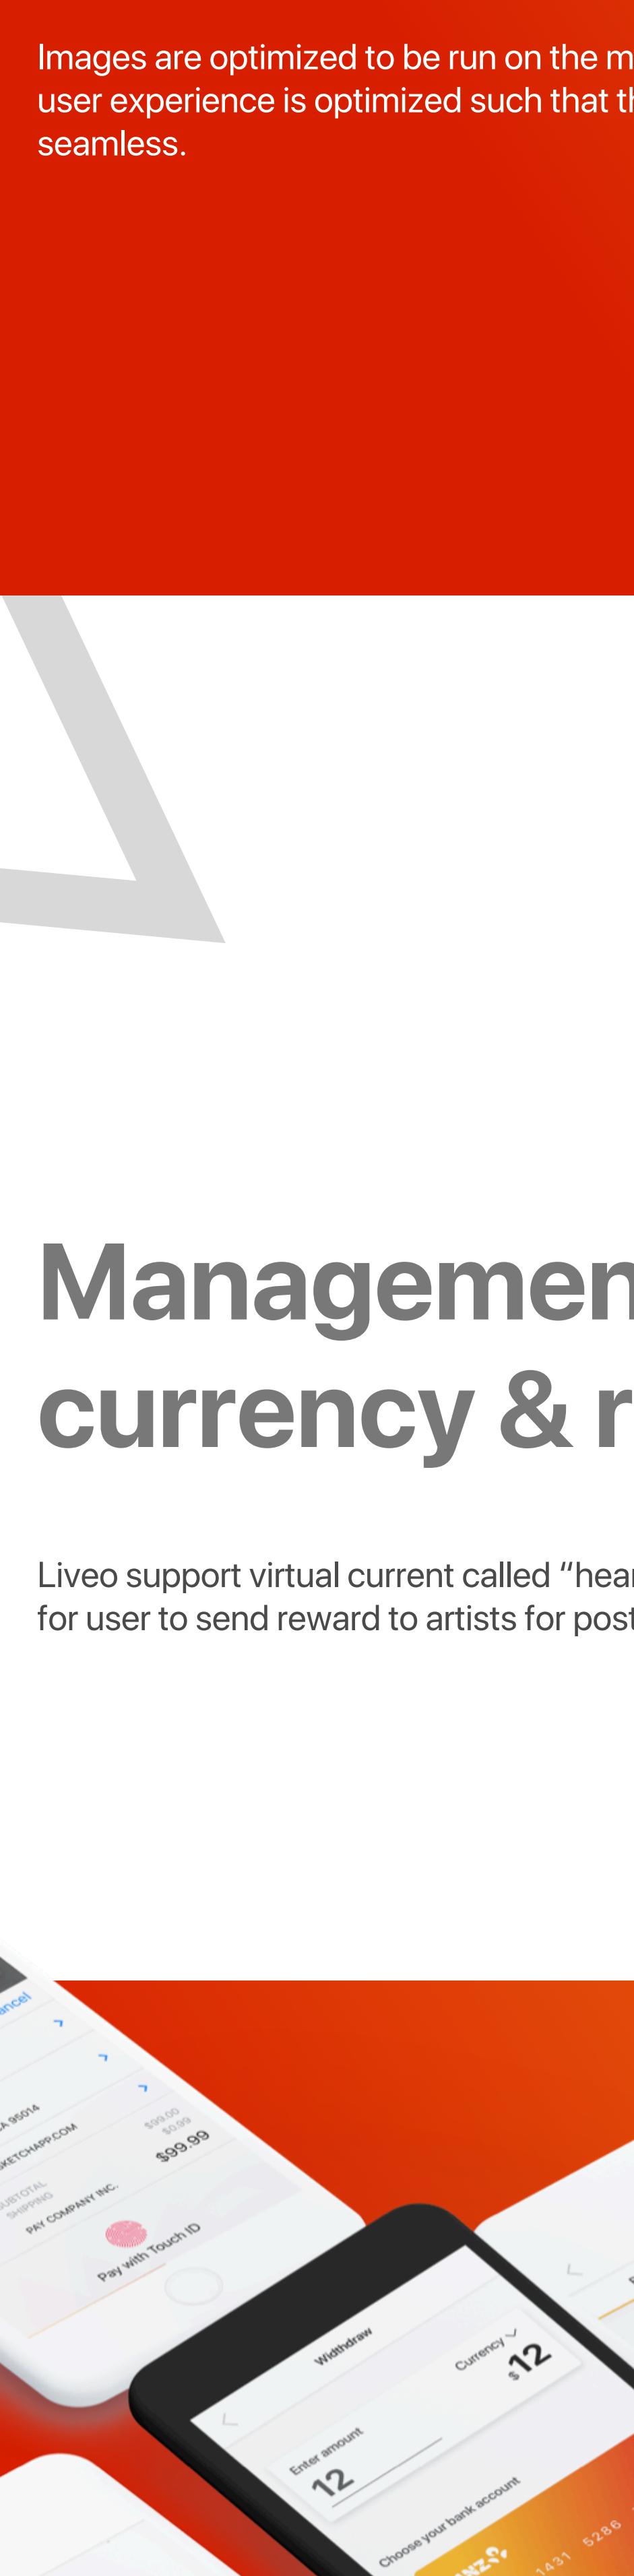

LIVEO Project - Rockship can build sophisticated application handling images, videos, livestreaming

Liveo is a platform for celebrities to engage with their fans effectively. With Liveo, fan have access to exclusive contents of the stars.

## Full-feature Image & Video Posting with filters

Liveo support multiple modes of media posting: image, videos, etc with editing features

## Management of virtual currency & rewards

Liveo support virtual current called "hearts" for user to send reward to artists for posting great contents

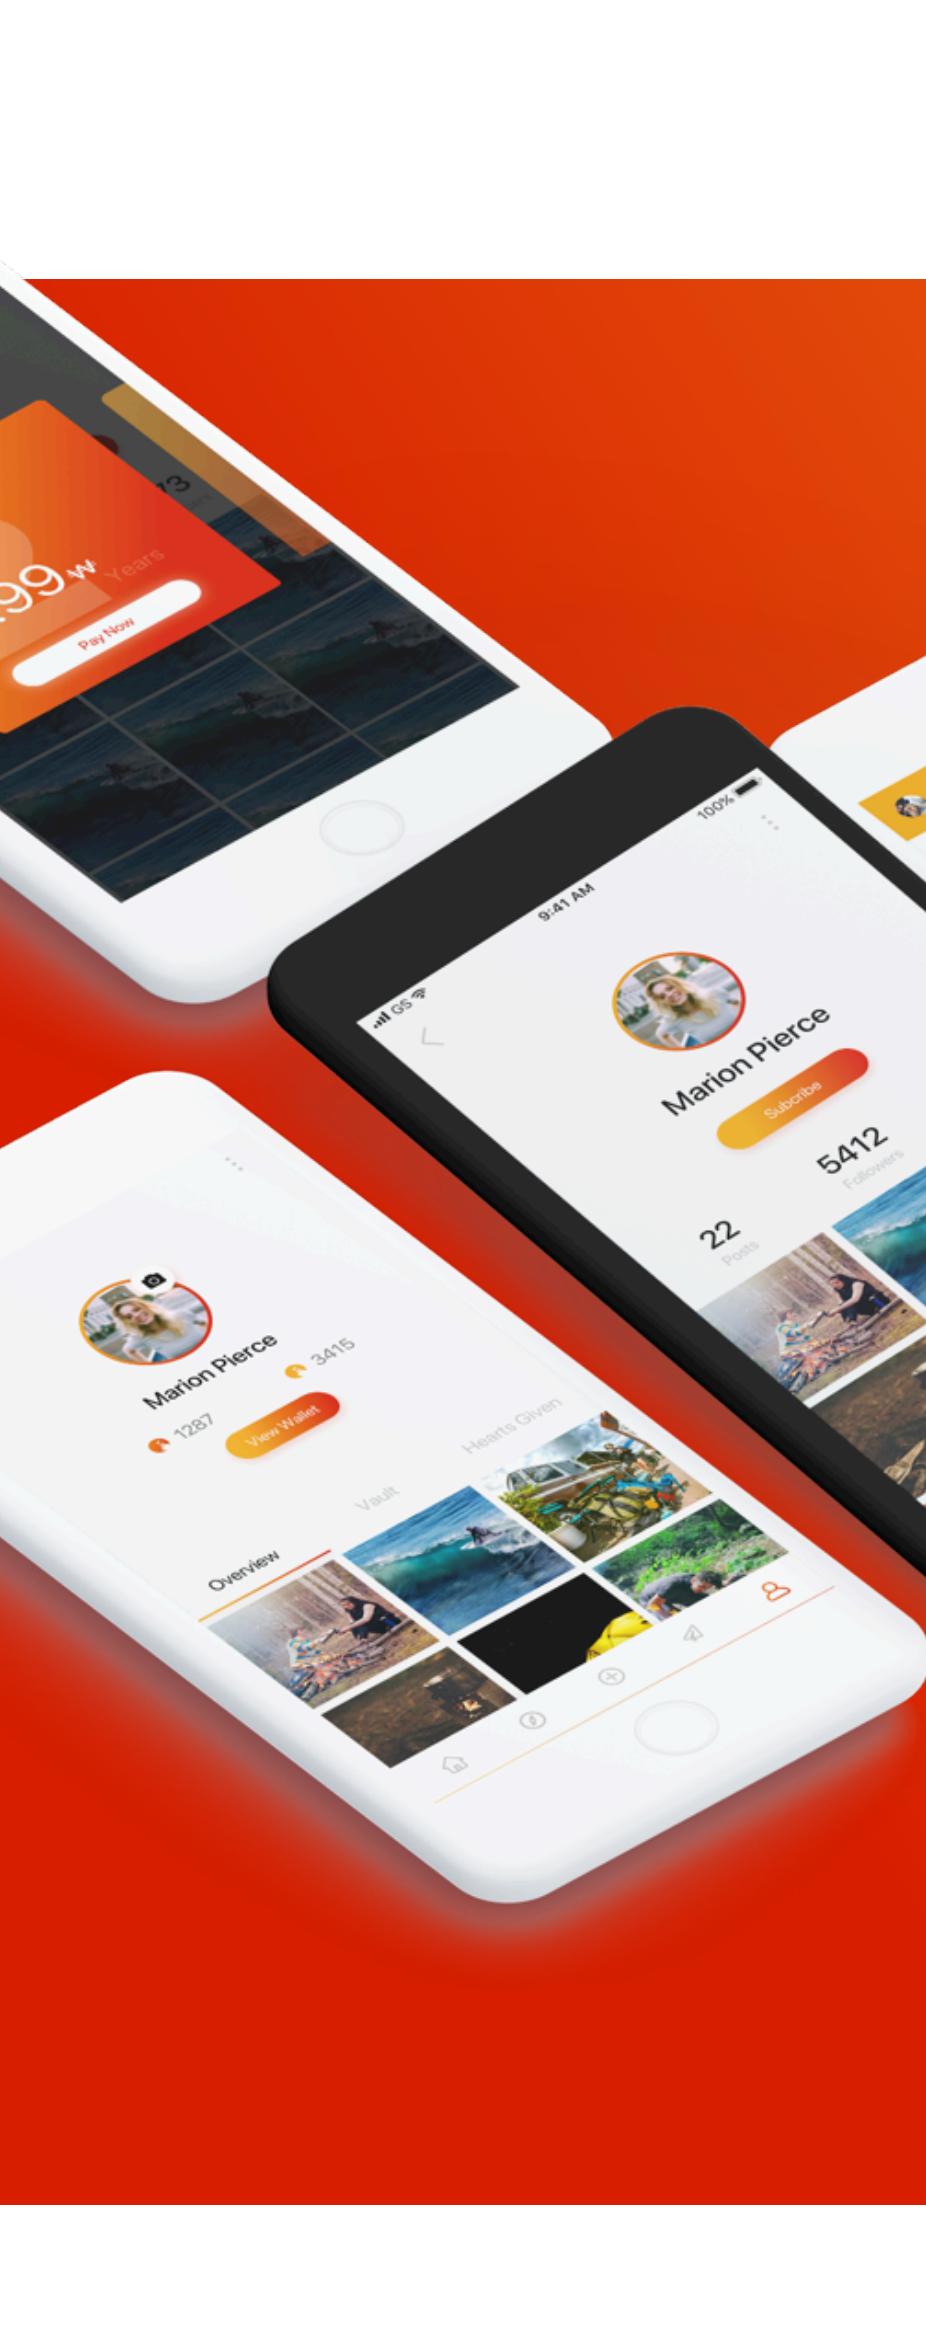

From Liveo, we have experience in building the ledger to manage the virtual currencies in the app.

In order to make sure that the balance is correctly credited, we need to implement double accounting system and locking mechanism to manage concurrent transaction.

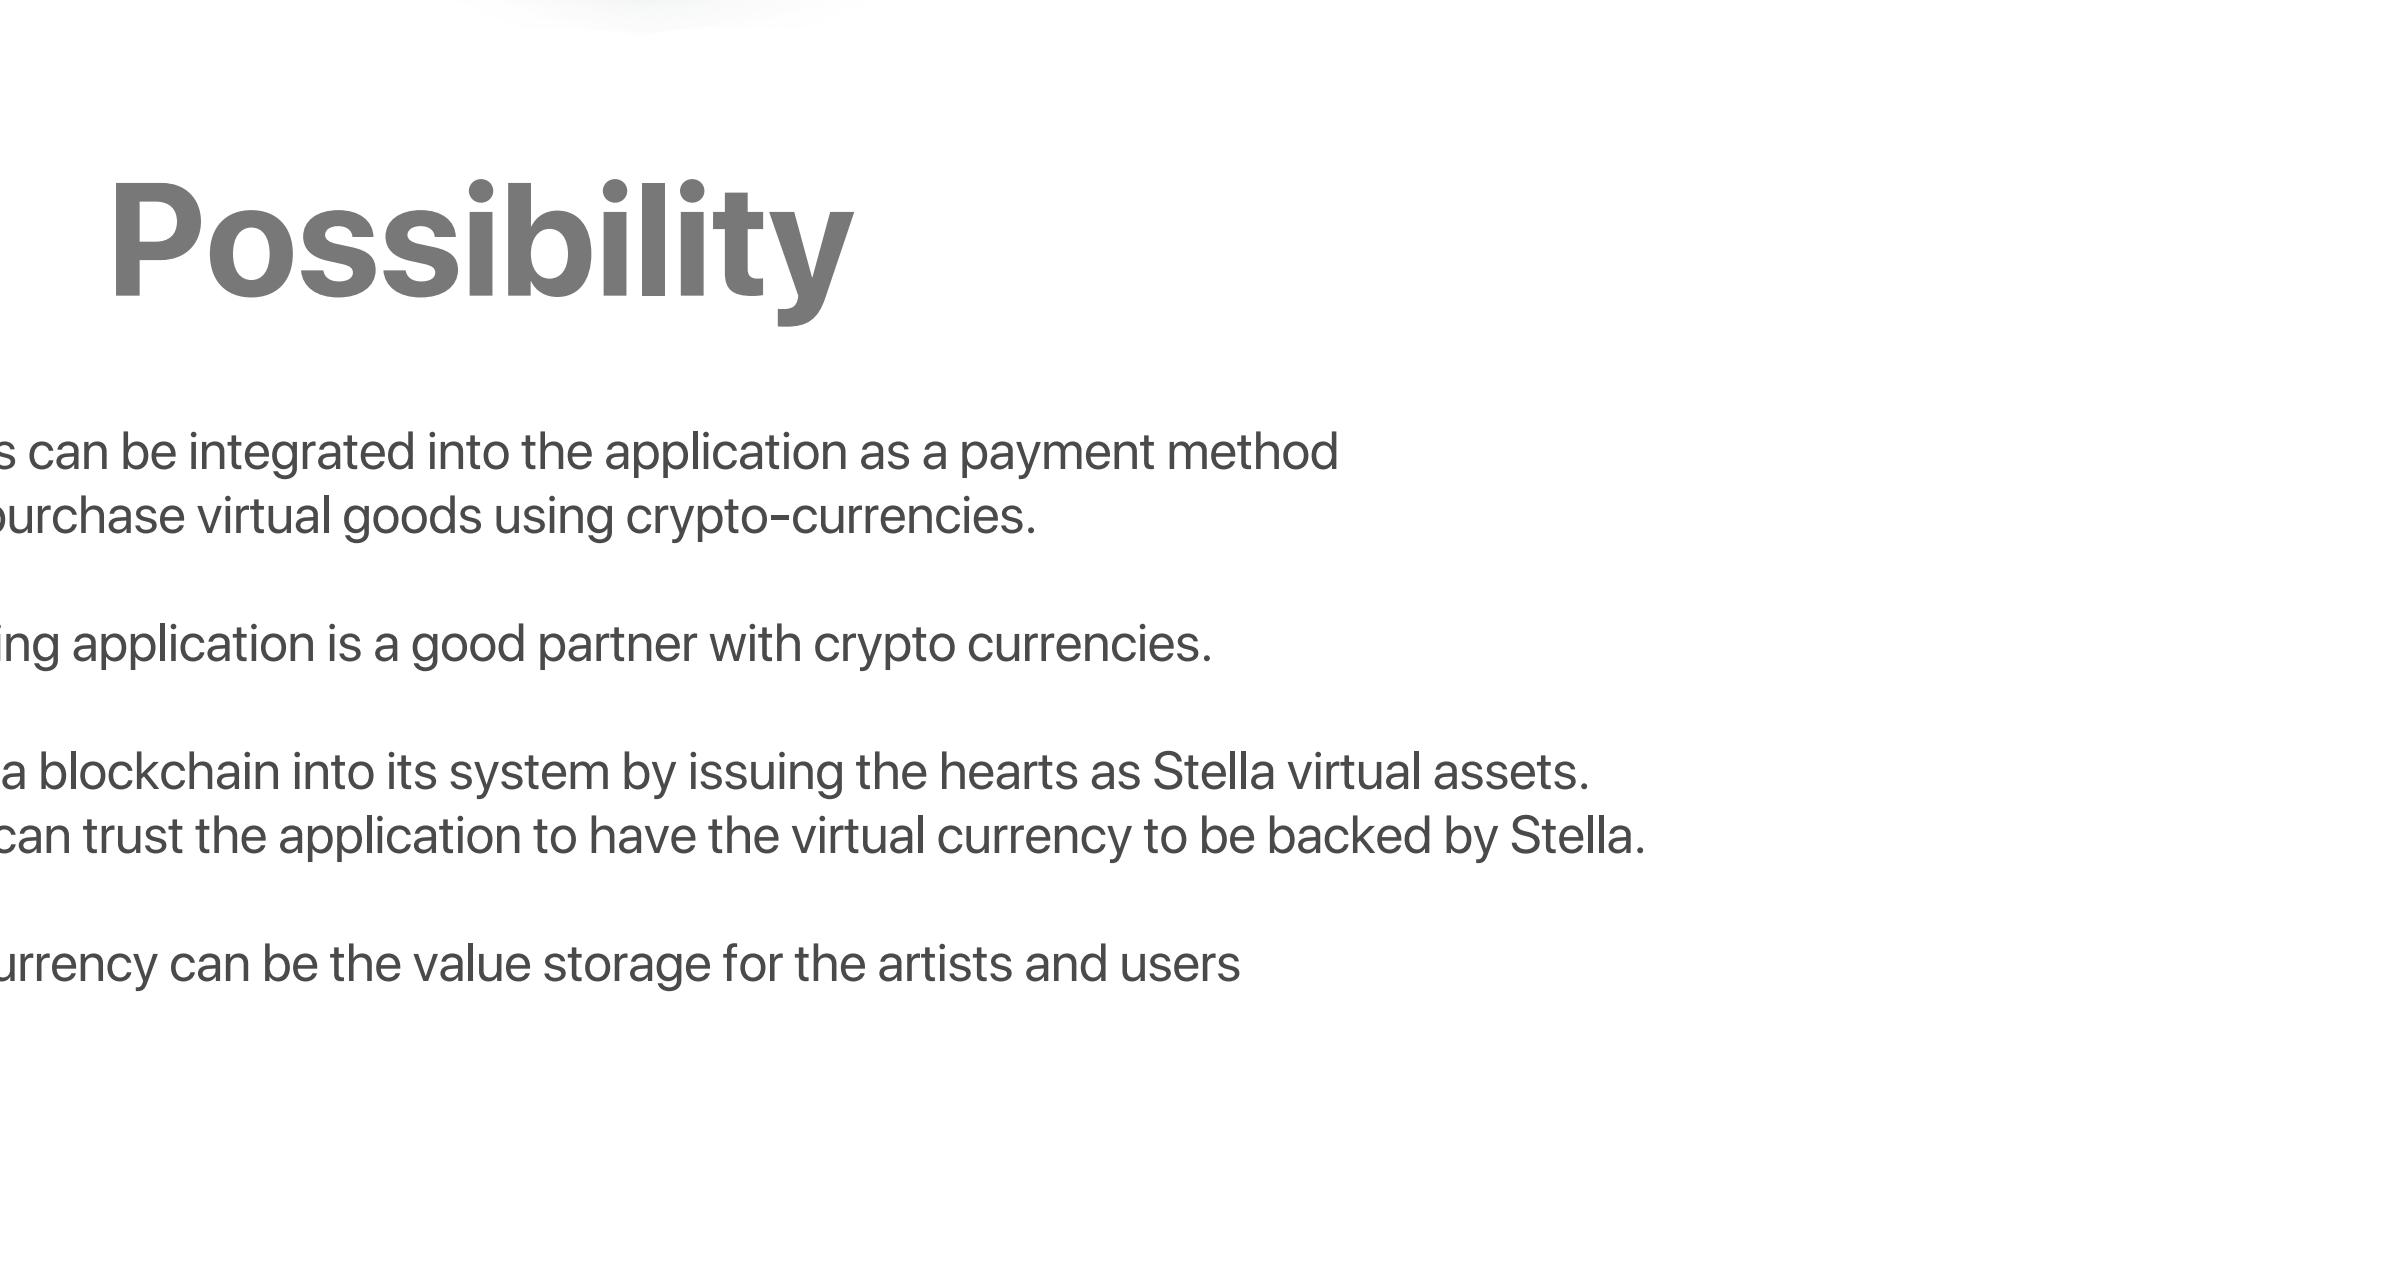

We allow users to top up via in-app purchase and cash-out via Paypal.

Other topup mechanisms are also able to support but it may not be well-complied with Apple policy.

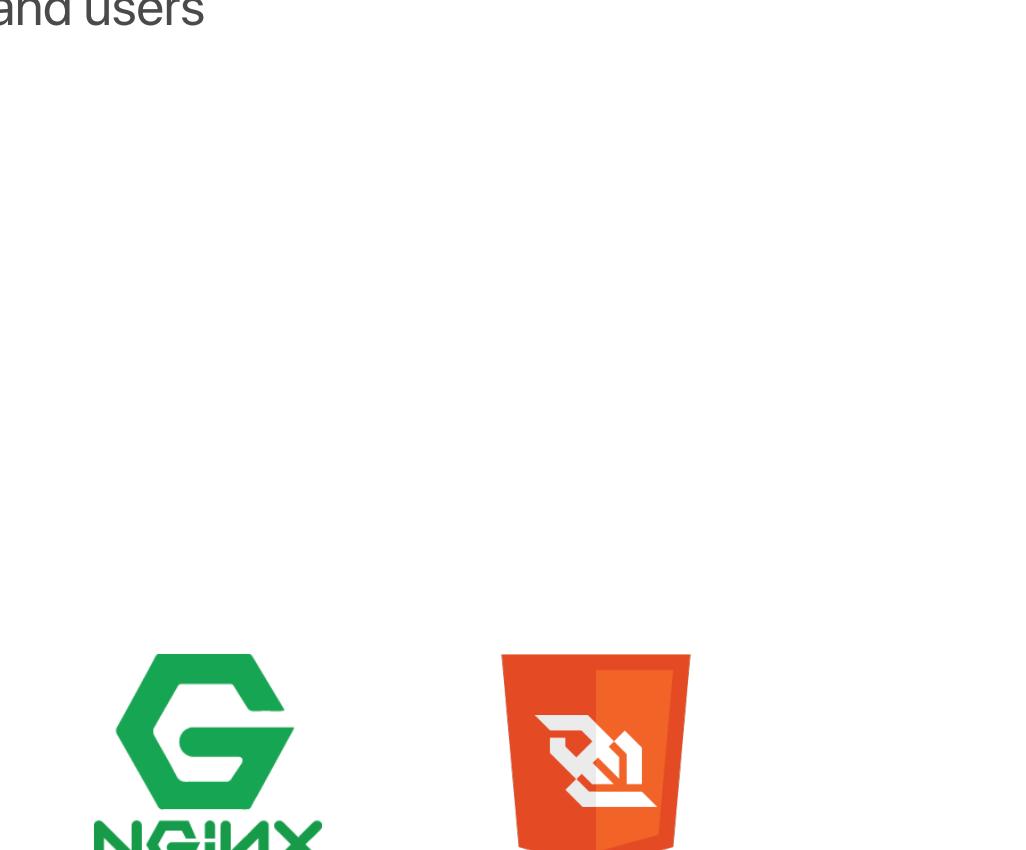

## Live & Beautiful interaction

Liveo support livestreaming to allow artist to interact with their fans in real-time

## Post rewards

Liveo support analytics features for artists to analyze their fans' activities

Liveo allow the artists to see the analytics on their post rewards.

This allows artists to be able to optimize their content so that they can make more money from the platform.

The virtual currency can be the value storage for the artists and users

## Possibility

Crypto currencies can be integrated into the application as a payment method to purchase virtual goods using crypto-currencies.

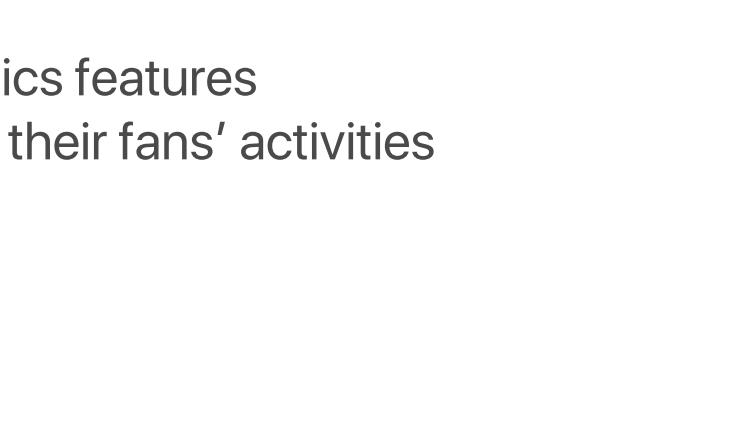

Livestreaming application is a good partner with crypto currencies.

Liveo can also integrate Stella blockchain into its system by issuing the hearts as Stella virtual assets.

In this way the user and artists can trust the application to have the virtual currency to be backed by Stella.

The virtual currency can be the value storage for the artists and users

## Technology

iOS +
